

CONTENTS

Chapter 1. Molecules Grains and Galaxies

	<u>page</u>
Molecular agitation and the boiling point	1
Equivalence of temperature and velocity	2
Particle agitation and terminal velocity	3
Correlating terminal velocities	4
Saturation particle concentration in TCC units	5
Mechanism of saturation concentration	6
Cyclones and condensers	7
Phase equilibrium in distillation and fluidization	8
Ideal system behavior	9
The Cox chart	10
Correlating vapor pressures	12
Molecular shape factors	13
Molecular curl	14
Froude number and dilute phase saturation	15
Critical temperature and critical velocity	16
Correlating dilute phase saturation	18
The vanishing point temperature	19
Correlating critical velocities	20
Particle fractionation	21
Dense phase "melting" points	23
Standpipe flow	24
Classification by surface tension	26
Horizontal flow regimes	27
The Baker flow diagram	28
The Dukler flow diagram	30
Particle attrition at grids	32
Size distribution and bed viscosity	33
Attrition in cyclones	34
Equilibrium bed distribution	35
Cyclone configuration and performance	36
Solids loading and collection efficiency	39
Flow and the angle of internal friction	40
The phase diagram	41
Molecular and particulate equivalents	43

Chapter 2. Correlating Incipient Fluidization

	<u>page</u>
Incipient fluidization	44
Bed void fraction	45
Correlations of incipient fluidization	48
Wilhelm and Kwauk	48
Zenz' modification	50
Leva's correlation	56
Frantz' equation	59
Wen and Yu's correlation	63
Davidson and Harrison	65
Barnea and Mizrahi	67
G effects of Deinken et al	76
Predicting incipient fluidization	76
Incipient fluidization and surface tension	81
Bed expansion	85
Entrainment rate and composition	93

Chapter 3. Distributors and Plenums

	<u>page</u>
Generic forms of distributors	97
The plenum chamber or wind box	100
Function of the plenum chamber	100
Design criteria for sparger plenums	101
Plenum inlet configurations	106
Packed plenums	109
Bundled reactors	109
Port characteristics	110
Pipe grids	110
Multilevel grids	112
Tuyeres and caps	115
Inserts, filtered, and tortuous perforations	119
Penetrated grids	121
Sloped grids	123
Stagnant versus fully active grids	125
Flat grids	125
Non-fouling grids	126
Cold grids	130
Laboratory and pilot plant grids	130
Thick grids	131
Shrouded grids	133

Grid pressure drop	135
Analogy to distillation trays	135
The pressure drop equation	138
Downflow (sparger) grids	142
Supports and seals	142
Jet penetration	145
Mechanism of bubble formation	145
Correlations of jet penetration	146
Erosion and attrition	149
Jet impingement	149
Rate of attrition	151
Attritors	152
Erosion of internals	153
Sample problem in grid design	155

Chapter 4. Solids Circulation in Fluidized Beds

	<u>page</u>
Solids circulation rates	163
Empirical correlations	163
Bubble displacement	167
Mixed particle sizes	168
Solids mixing gradients	169
Gas mixing	173
As a diffusional phenomenon	173
In relation to solids flow	179
Solids circulation applied to blending	179
Grid bubbling rate	179
High efficiency blending	182
Solids feed and dissipation	182
In-bed feeding	182
Above bed feeding	186
Feed stream trajectories	186

Chapter 5. Particle Segregation

	<u>page</u>
Categories of in-bed particle movement	191
Segregating conditions	193
Illustrative example	196
Rate of particle segregation	199
The correlation of Curran and Gorin	204
The data of R. Jackson	209
The investigations of S. K. Iya	210
Illustrative example	211

Chapter 6. Particle Entrainment

	<u>page</u>
Principal published correlations	215
Analogies to vapor-liquid equilibrium	225
Procedure in calculating entrainment	237
Transport Disengaging Height	242
Entrainment below TDH	244
Effective velocity and cyclone location	246
References cited	252

Chapter 7. Cyclone Collectors

	<u>page</u>
Introduction	253
Basic theory	256
The "cut point" particle diameter	257
Dust concentration	259
Length of path	259
Stokes' law limits	260
Velocity decay	261
Dimensional considerations	267
Inlet configuration	267
Gas outlet tube penetration	268
Barrel roof and annulus	269
Inlet duct dimensions	271
Cyclone length and O/I ratio	273
Cyclone shape	275
Dipleg size	278
Performance correlations	282
Particle shape	284
No. of spirals and fractional efficiency	286
Outlet tube I.D. and cyclone length	288
Effect of solids loading	290
Effect of outlet tube penetration	295
Saltation and reentrainment	295
Underflow	306
Coupling effects	308
Industrial performance data	311
A pharmaceutical product	312
Bark boiler	313
Coal combustor	315
Flyash test	317
Fertilizer plant	317
Scaled test of a 3rd stage FCC catalyst collector	319
Pressure drop	320
Gas only	320
Under collection conditions	320
Abrupt contraction	321
Solids acceleration	322

Chapter 8. Equilibrium Bed Particle Size

Barrel loss	322
Reversal loss	323
Exit contraction	323
Pressure balance	324
Manifolding	327
Orientation in fluidized bed reactors	329
Elevation above bed surface	329
Internal vs external location	330
Dipleg operation	332
Dipleg seal	335
Height above grid	340
Riser cyclones	343
Particle attrition in cyclones	344
Attrition effects	344
Correlating attrition	346
Equilibrium bed particle size distribution	349
Equilibrium time	357
Design innovations	357
Vortex breakers	358
Vortex stabilizers	359
Underflow	360
Secondary streams	361
Mechanical rotation	361
Nested cyclones	362
Widened annuli	362
Shave-offs, skimmers and Tangentials	363
Bed recycle	365
Mechanical design aspects	366
Refractory lining	366
Leak testing	370
Internal cyclone support and bracing	372
Erosion	373
Vendor responsibilities	377
Specifications and guaranties	377
Malfunctions	380
Sample design and performance calculations	382
Collection efficiency	382
Pressure balance and dipleg densities	387
Manifolding	389
References cited	393

Process aspects of changing composition	395
Sources of attrition	398
Correlating attrition from operating data	401
Equilibrium bed fines content	404
Applications of the empirical attrition correlation	406
Time required to reach equilibrium	408
Modelling the attrition sequence	408
Typical equilibrium time predictions	414
Attrition at grids vs in cyclones	416
Conclusions	422

Chapter 9. Internals in Fluidized Beds

Geometric arrays of tubular internals	426
Effect on bubble hydrodynamics	429
Miscellaneous arrangements of internals	435
In-bed attritors	436

Chapter 10. Heat Transfer Correlations

Vertical surfaces	442
Modes of contact	442
Through moving solids	444
Effective coefficients	452
Tube size and fin effectiveness	455
Horizontal surfaces	457
Choice of orientation, and critique	457
Modes of contact	461
Overall coefficients	462
In dilute phase regions	464
Bibliographies	465
References cited	466

Chapter 11. Fine Particle Recovery via Dry Bed Filtration

Purposes and applications	468
Porous sintered granule beds	472
Continuous moving bed filters	475
Intermittent moving bed filters	479
Fluidized bed filters	487
Granular bed filters mechanically cleaned	489
Granular bed filters pneumatically cleaned	493
Systems under development and commercialization	496
Fuller-Squires panel bed filter	496
CPC annular bed filter	497
Canmet-Prasco Ltd., Hitec system	500
Kawasaki louvered bed	503
Pemm-Corp Restricted Circulation filter	505

Melcher Electrofluidized bed filter	506
Peoples Republic of China filter	508
The Ducon GBF	509
Ideal single particle dynamics	509
Multi-particle effects within the bed	512
Optimization of bed characteristics	514
Support grid design	516
Blowback cleaning	519
Ejector sizing	520
Compressed gas surge tank	525
Element dimensions	527
Collection efficiency	532
Media pressure drop	533
Parallel module overload	536
Past trials	541
References cited	547
List of selected patents	552

Chapter 12. Ejectors or Eductors

	<u>page</u>
Operating principles	555
Nozzle dimensions and orientations	556
Correlation of operating variables	556
Operating characteristics	558
Optimum performance	560
Design data	562
Vacuum inducers	562
Compressors to 850 psig discharge	564
Particle flow induction	568
Sample calculations	576
Critical flow	576
Sub-critical flow	579
Gas eductor design	582
Derivations of gas flow equations	584

Chapter 13. Feeding Dry Solids into Pressured Vessels

	<u>page</u>
Standpipes	591
Valved standpipes	591
Unvalved standpipes (non-mechanically valved)	599
Angle of repose valve	599
I.C.I. valve	600
Fuller "Airslide" valve	600
Ducon "Fluoveyor" valve	604
I.G.T. "L" valve	606
I.G.T. "J" valve	608
S.O.D. dipleg seal	608
Socony Vacuum TCC lift pot	611
Dorr-Oliver Fluosolids drawoff seal	611
ESSO Model IV U-Bend	613

Contracted standpipes	616
The Ducon "G-Seal"	619
The Kinetic Extruder	623
Eductors	626
Lock hoppers	629
Conventional batch operation	629
Continuous operation	631
Rotary gates	631
Two-door discharge gates	633
Linear pocket feeders	635
Hapman drag chain	636
Foster-Miller Assoc's.	636
Piston feeders	636
Ingersoll-Rand	636
Bituminous Coal Research	640
Con Spray	640
Tank type	649
Petrocarb, Allen-Sherman-Hoff	649
Warren Spring-Sturtevant, Sprout-Waldron	649
Babcock & Wilcox, Allied	651
Gattys, Buhler- Miag, Waeschle, Ducon, Battelle	654
Labyrinths (or clearances)	657
Screw feeders	657
Fuller-Kinyon pumps	660
The Moyno pump	661
Peristaltic pumps	661
Blow tanks	665
